0 of 3 review helpful Faculty request By Carla Robinson This is a faculty request for our institute The faculty member checked the book out as soon as I had processed it Light scattering based methods are used to characterize small particles suspended in water in a wide range of disciplines ranging from oceanography through medicine to industry The scope and accuracy of these methods steadily increases with the progress in light scattering research This book focuses on the theoretical and experimental foundations of the study and modeling of light scattering by particles in water and critically evaluates the key constraints of lig
