Volume 33:

Fish Physiology Organic Chemical Toxicology of Fishes discusses the different types of organic chemical contaminants and their respective toxic effects in fish. The book also covers the detection of dissolved organic compounds and methods to assess organic toxicity. Substances addressed in this book include organometallics, hydrocarbons, endocrine disrupting compounds, EDCs, insecticides, herbicides, and pharmaceuticals. Fish are exposed to an ever increasing well-written synthesis of the literature created by an impressive panel of experts. It will have longevity on the ecotoxicologist's bookshelf. *The Quarterly of Biology Organic Chemical Toxicology of Fishes*
