Stream Ecosystems in a Changing Environment synthesizes the current understanding of stream ecosystem ecology emphasizing nutrient cycling and carbon dynamics and providing a forward looking perspective regarding the response of stream ecosystems to environmental change Each chapter includes a section focusing on anticipated and ongoing dynamics in stream ecosystems in a changing environment along with hypotheses regarding controls on stream ecosystem function About the Author Jeremy B Jones Jr studies land water interactions how processes occurring in terrestrial ecosystems impacts the movement of carbon and nutrients into streams and how nutrients are used within stream ecosystems His research has a particular
