care and daily background effective rehabilitative therapies are needed for patients with long term deficits after stroke methods in this multicenter randomized controlled trial Introduction to Neural Engineering for Motor Rehabilitation:

Neural engineering is a discipline that uses engineering techniques to understand repair replace enhance or treat diseases of neural systems Currently no book other than this one covers this broad range of topics within motor rehabilitation technology With a focus on cutting edge technology it describes state of the art methods within this field from brain computer interfaces to spinal and cortical plasticity Touching on electrode design signal processing the From the Back Cover The only book that covers in detail a broad range of cutting edge topics within motor rehabilitation technology Neural engineering is a discipline that uses engineering techniques to understand repair replace enhance or treat dis
