phylum Freshwater Dinoflagellates of North America:

Dinoflagellates are common unicellular organisms found in all types of aquatic ecosystems and are important contributors to freshwater ecosystems as significant primary producers of biomass. Despite increasing interest in the biology of living and fossil dinoflagellates, there has been no compilation of dinoflagellate species found in North America since 1934 and no keys to species. In *Freshwater Dinoflagellates of North America*, Susan Carty provides a *Freshwater Dinoflagellates of North America* features excellent coverage of the literature, geographic regions of the continent and types of habitat in which dinoflagellates are found.
