From Wiley-Blackwell: Species and System Selection for Sustainable Aquaculture the main applications of microalgae for aquaculture are associated with nutrition as sole component or as food additive to basic nutrients for coloring the flesh of the hacep approach to prevent the spread of aquatic invasive species by aquaculture and baitfish

operations Species and System Selection for Sustainable Aquaculture:

0 of 0 review helpful Sustainability is of paramount concern By A Correa Becker As the global demand for aquacultured products continues to rise so does the need for social economic and environmental sustainability With this expansion established species under production are augmented with new and emerging species with perceived enhanced value Likewise established and new production systems and technologies are Published in Cooperation with THE UNITED STATES AQUACULTURE SOCIETY As aquaculture production continues to grow and develop there is a continuous search for new species to culture to be able to fully exploit new national and international markets Species selection for aquaculture development often poses an enormous challenge for decision makers who must decide which species and culture technologies to support with public resources and then how best to divide t The book is traditional proceedings fare with a mix of overview articles and experience papers covering a range of topics The book has a socioeconomic focus but it can be read by those with little or no formal training in social sciences The authors have
