**From CRC Press : Marine Macrophytes as Foundation Species** a split flow chamber with artificial sediment to examine the below ground microenvironment of aquatic macrophytes seaweed refers to several species of macroscopic

multicellular marine algae the term includes some types of red brown and green algae seaweed can also be Marine Macrophytes as Foundation Species:

Marine macrophytes macroalgae seagrasses and mangroves comprise thousands of species distributed in shallow water areas along the world's coastlines They play a key role in marine ecosystems regarding biodiversity and energy flow A large proportion of macrophyte species can be characterised as ecosystem engineers organisms that directly or indirectly affect the availability of resources to other species by modifying maintaining and creating habitats This excellent new volume is devoted to the ecology biodiversity and energy production and flow of macroalgae and seagrasses living along the coastlines of oceans and the most recent environmental threats to their communities Chapters are written by expert
