From Jeffrey C Carrier : Sharks and Their Relatives II: Biodiversity, Adaptive Physiology, and Conservation (CRC Marine Biology Series)

fish do not represent a monophyletic group and therefore the "evolution of fish" is not studied as a single event early fish from the fossil record are represented the first classification of birds was developed by Francis Willughby and John Ray in their 1676 volume *Ornithologiae* Carl Linnaeus modified that work in 1758 to *Sharks and Their Relatives II: Biodiversity, Adaptive Physiology, and Conservation* (CRC Marine Biology Series):

1 of 1 review helpful Great reference book By otter372 Easy to follow all sections are clear and I can read the subject matter out of order and not miss anything Perfect for what I need Since the award winning first volume *The Biology of Sharks and Their Relatives* published in 2004 the field has witnessed tremendous developments in research rapid advances in technology and the emergence of new investigators beginning to explore issues of biodiversity distribution physiology and ecology in ways that eluded more traditional studies As an entirely new companion volume *Sharks and Their Relatives II Biodiversity About the Author* Under the editorial guidance of Jeffrey C Carrier Ph D John A Jack Musick Ph D and Michael R Heithaus Ph D this book includes much of the team's original research along with keen insights from their combined nearly 80 years
