**From Jay Cheng : Biomass to Renewable Energy Processes** biomass is one of the most plentiful and well utilised

sources of renewable energy in the world broadly speaking it is organic material produced by the renewable energy is energy that is generated from natural processes that are continuously replenished this includes sunlight geothermal heat wind tides water Biomass to Renewable Energy Processes:

Continuously increased consumption of fossil fuels decreased availability of easily accessible fossil fuels significant contributions to climate change and wildly fluctuating fuels prices have combine to challenge the reliability and sustainability of our current energy supply A possible solution to this energy challenge biomass energy production heavily dependent on sugarcane and corn production is vulnerable to the fluctuation of the feedstock price New techn
